SUMMARY

A soul that embodied the thirst for knowledge with a spark interest in Engineering, more precisely on the Frontend side. Living for the sake of learning and programming. Recently focusing ReactJS. I may seem as aloof and sophisticated in person, but is actually cordial to be around with.

EXPERIENCE

Frontend Engineer
AuthScure Sdn. Bhd. Apr 2018 - Nov 2018

I was introduced to ReactJS and Redux from this moment and found myself enjoying the workflow and teamwork.

Frontend Developer
DOT Indonesia Feb 2019 - Dec 2019

Here I learnt more than teamwork and agile, specifically SCRUM environment. To be agile and precise in problem-solving, I found my calling in programming singing as I found my way to be a true programmer

Frontend Developer
Gusto XR Lab Dec 2019 - Feb 2021

I faced many new languages and tools. I learn a lot of languages such as PIXIJS, ARJS, ThreeJS, and AframeAR also DeepAR along with 8th Wall. I find myself enjoying learning and understanding new languages.

Junior Front-end Developer
Panggilin Apr 2021 - Present

I learned to be independent and multi-task in my work, from programming to research in performance wise which decisions are the best. I also began to understand how important it is to be more proactive in the development lifecycle.

EDUCATION

Software Engineering
Telkom Private Vocational High School 2015 - 2018

I learned the foundation from the basic arithmetics in programming to advanced courses like creating an app in mobiles using JAVA and there's also web engineering courses that I excel on.

Computer Science
Binus University Malang 2019 - Present

To re-learn the basics and got through many theories from the foundation that I lack so I began to understand more of why than how in programming decisions.

PROJECTS

Pointsnet
Frontend Engineer

Because of the limited time, we ended up using ExpressJS and Pug to create this product. The product itself is to redeem points from multiple clients such as StarBucks, Giant, etcetera into cash or directly deduct the original fee with the point when shopping.

TAMAM Marketplace
Frontend Developer

My role was updating the application into Vue.Js Web application and adding new features with new designs. The product is B2B shop which is internal for religious schools that are under the same foundation.

Infralib SMI
Frontend Developer

A CR Project to be more precise it was the fifth CR. Created to share knowledge and information to the media/users. New designs and added more features.

Halloween Festival/DEVB
Frontend Developer

Using react and redux along side 8th wall to detect faces for the filter not unlike snapchat. We faced a bit of drawback when the gps location return location is not as accurate as we hoped, but we found the solution to that. To access the user must be in the location and has to scan the code to access the filter or download sticker

Coreality
Frontend Developer

Using functional components in React and Redux Thunk, we made a product to where we can provide services and show our firsthand product. There's also Discussion just like the title suggest was for discussion and Article section just to share what opinions you have

Joobloop
Frontend Developer

Created B2B website where Companies and Start-ups can recruit the talents available, which are users of Panggilin Web App and Panggilin Mobile App. I chose to use react-hook in this project.
